SUMMARY

Senior Product Manager with end-to-end experience leading large-scale digital products across FinTech, AdTech and MedTech. Experienced in driving product initiatives from planning to launch, defining product roadmap and requirements, aligning stakeholders, and leading agile delivery. Delivered features that improve usability, accessibility, retention, and user experience. Brings combined expertise in product management, frontend engineering and UX design.

EXPERIENCE

Rakuten Group Inc.

May 2026 - Present

Senior Product Manager

- Drive product growth and delivery initiatives for Rakuten Travel Ads.
- Define product requirements and support end-to-end execution of advertising solutions that help travel partners improve visibility, campaign performance, and revenue growth.
- Collaborating with cross-functional teams in a global environment, working closely with engineers, designers, and business stakeholders to deliver user-friendly product.
- Analyze advertising business models, campaign mechanisms, and user incentive products to identify opportunities for product improvement and operational efficiency.

KDDI Corporation

Mar 2022 - Apr 2026

Product Manager

- Led product launch for user-facing au PAY features, including a New Point Program for Loyalty, User Benefits Program, Charge Feature UI/UX Renewal, Charge before Pay flow, Amazon Connection, Residence Card-based user verification, and Transaction History Redesign etc.
- Defined product requirements, user flows, and UI/UX prototypes in collaboration with marketing, design, analytics, engineering, and external partner teams.
- Drove end-to-end execution from requirement definition, user story planning, agile delivery, testing, release coordination, and post-release improvement across web and app touch points.
- Conducted GA-based behavioral analysis to identify user journey pain points, designed hypotheses, and supported A/B testing to improve usability and reduce user drop-off.
- Facilitated Scrum ceremonies, including Sprint Planning, Backlog Refinement, Reviews, and Retrospectives, removing delivery bottlenecks and improving team velocity by over 20% within one release cycle.
- Introduced AI-assisted development tools such as Gemini, Copilot, Claude Code to improve productivity and team learning.
- Mentored junior product managers and interns.

Front-End Engineer

- Developed 35+ new pages and improved 50+ existing pages for au PAY services using modern frontend technologies, while leading code reviews and frontend quality improvements.

Fujitsu Limited

Apr 2019 - Feb 2022

Product Consultant / System Engineer

- Led coordination and delivery activities for large-scale Electronic Medical Record system upgrades at university hospitals, collaborating with 130+ stakeholders across development, operations, and client organizations.
- Managed requirement gathering, solution design, release planning, risk management, and stakeholder negotiations throughout multiple project phases.
- Served as the primary liaison between hospital users, business stakeholders, and engineering teams, translating operational requirements into system enhancements and implementation plans.
- Developed and customized medical billing system functions, handling requirement analysis, design, implementation, testing, and onsite deployment for healthcare clients.
